

Managed SASE

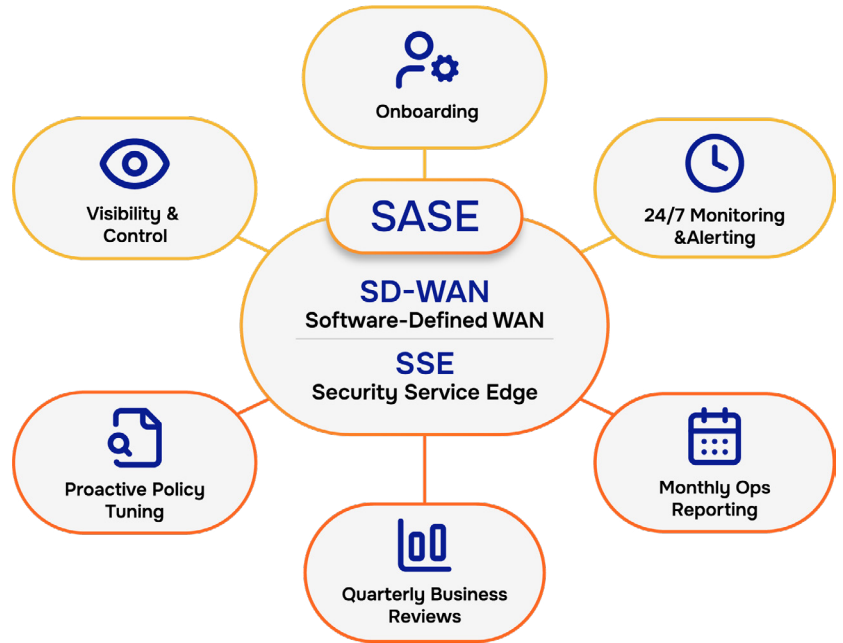

Secure Access Made Simple for the Modern Workforce

What It Is

Managed SASE powered by Zscaler's industry-leading cloud security platform gives users direct and secure access to the applications and data they need without the lag or complexity of traditional VPNs and firewalls. It unifies **SD-WAN** for optimized connectivity and **Security Service Edge (SSE)** for cloud-delivered protection, bringing performance and security together in one fully managed experience.

TPx manages everything from start to finish, including setup, configuration, policy tuning, optimization, and ongoing reporting. By combining Zscaler's proven security technology with TPx's managed expertise, businesses gain seamless connectivity, consistent protection, and simpler management everywhere work happens.

How It Works

TPx makes the SASE journey simple. Stay secure and connected, without disrupting your operations or reinventing your infrastructure.

- 1. Discover & Design:** We assess your current network to create a tailored adoption plan.
- 2. Deploy & Integrate:** We configure SD-WAN and SSE to work with your existing identity systems.
- 3. Manage & Optimize:** Our experts monitor, update, and report with quarterly business reviews included.
- 4. Evolve & Expand:** As your business grows, we help you scale coverage, strengthen policies, and adopt new capabilities.

Key Benefits

- **Flexible Adoption:** Start with SD-WAN, SSE, or both – build your SASE journey at your own pace.
- **Modernize Security:** Strengthen protection and performance without replacing existing systems.
- **Simplified Access:** Replace legacy VPNs with faster, more secure direct access to data and applications.
- **Complete Visibility:** See how every app and user, including GenAI tools, interacts with your network, supported by quarterly advisory reviews
- **Effortless Compliance:** Safeguard sensitive data to meet industry standards like HIPAA and PCI with less complexity.

Managed SSE Components to Complete your SASE Journey

TPx Managed SSE delivers the security foundation of a modern SASE framework – protecting users, applications, and data wherever work happens. It provides predictable, scalable costs through per-user subscription pricing, making budgeting simple and transparent.

The base subscription includes **Secure Access** for user protection, while **Data Governance** can be added for advanced compliance and visibility. Each service includes policy configuration, change management, system maintenance, reporting, analytics, and advisory quarterly business reviews to ensure continuous optimization.

Bundle	What It Does	Key Capabilities	Business Outcomes
Secure Access \$20/user/month	Protects users and applications everywhere with cloud-delivered security.	Cloud-based Secure Web Gateway (SWG): Threat protection for browsing and SaaS use. Private Application Access (ZTNA): Direct, identity-based access to private applications without VPNs. Reduces attack surface while improving speed and user experience.	Consistent Security Everywhere: Same protection across office, home, and mobile. Reduced Hardware and Management Burden: Shifts security functions to the cloud so IT teams can reduce maintenance, simplify operations, and lower infrastructure costs.
Data Governance \$45/user/month	Extends control and visibility to SaaS and AI tools for stronger compliance.	Cloud Access Security Broker (CASB): Monitors and controls SaaS data sharing. Data Loss Prevention (DLP): Prevents sensitive data from leaving the organization.	Visibility Across Cloud & AI Apps: Understand and secure data usage. Compliance Made Easier: Support HIPAA, PCI, and other standards with less manual effort.

Why TPx

Simplicity: Delivered as a fully managed service, from design to optimization

Interoperability: Works with your current network and identity systems, no rip-and-replace required

Adoption & Optimization: Guided by quarterly business reviews that ensure continuous improvement

Partnership: You can count on us to be more than just another vendor

Expert Team Extension: We'll manage the complexity so your IT team can focus on business priorities

Flexible, Predictable Growth: Scalable pricing and managed support that grow with you

Modernize Your Security Without Starting From Scratch.
