Worldly job opportunities - 60% of jobs require some knowledge of coding

Why just girls?

Only 0.4% of high school girls express interest in majoring in Computer Science. **What's going on?**

A high % of girls think being smart is not cool. They feel inhibited when boys are present to let their true creativity and intelligence shine.

To close the gender gap in technology, we have to inspire girls to pursue computer science by exposing them to the fun, amazing opportunities of coding.
