About us :

Wildfong Enterprises is a Farm based Combine part manufacturer in Saskatchewan Canada. Often we get wet tough crops that lodge and plug machines constantly, similar conditions that Rice Growers deal with on a daily basis. We also have incredibly hard rocks that destroy OEM parts. We decided enough was enough and began building the strongest, hardest parts in North America with a full Rock/Material ingestion warranty. The parts will last longer than anything else on the market due to the incredible AR 450 plate steel we use. It's hard as chrome but has a much higher tensile strength. For high-wear Rice Producers, this is the answer you've been looking for!

Rice beater:

Factory tooth-style rice beaters work well, however, when the teeth wear down the customer has to change the entire bar. With our one-piece Beater Design, the Dynamically Balanced Beater stays in the combine and only the teeth get changed out as they wear down. Same concept as the Chopper.

- Replaceable, cost-effective AR 450 Teeth
- Smaller diameter drum for improved crop flow and capacity
- \$5000 per beater, including a spare set of teeth

Wildfong Threshing Elements :

- Cast in North America, Hardened in Canada with a patented "Austempering Treatment" that realigns the crystal structure of the steel, not just a surface coating such as the extended wear parts from OEM
- Fits all Vari-stream rotors
- \$150 per element, compared to \$600 at our local OEM dealership

Rice concaves:

Designed for high volume, bulky crops that bridge and plug traditional concaves, our “Universal Concaves” provide the best thresh and separating capacity. Where round bars fail to thresh, these have a natural ledge in front of the crossbar to hold material long enough to thresh out before falling through.

John Deere Rice Concaves :

·\$3600 a set of 3 concaves

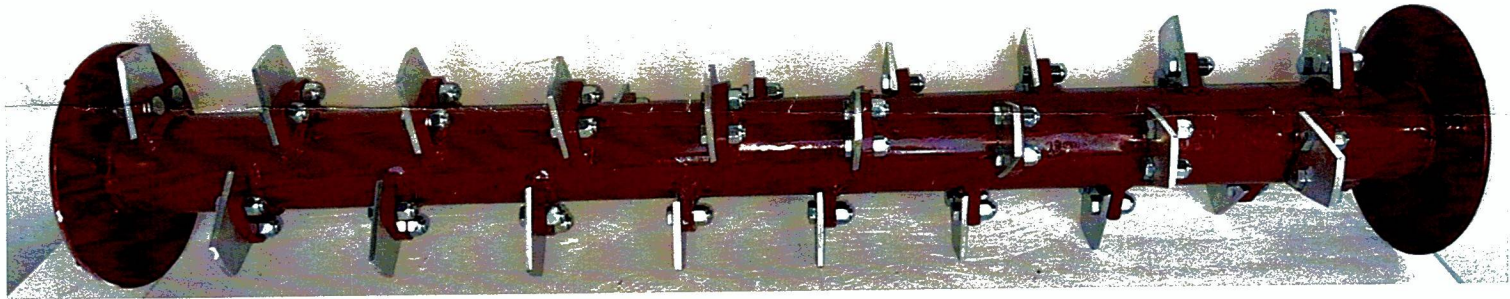

Case Rice Concaves :

\$4000 a set of 4

Case IH

The Wildfong Rice Beater for Case Combines is the only product on the market to provide a tooth-style beater. In many cases, customers have told us they have to shut down in tough conditions while the Green Neighbors keep cutting. Sold with a replaceable 3-lobe drive shaft that fits in the gearbox, which means a much longer lifespan than the factory-splined shaft. Can be purchased with a 3-lobe Feeder chain shaft for maximum lifespan and savings.

·Tooth design “combs” through the material to feed evenly, increase capacity, and accelerate material into the rotor. Every Rotary combine needs an Accelerator!

·Teeth are AR 450 plate and can be changed out very economically.

·\$5,000 for the accelerator and spare set of teeth.

Wildfong 2 Piece Concave Cradle

Nicknamed “Lefty Righty” these two get you back in the field when your OEM concave frame cracks, bends, or breaks. With an OEM cradle, the feeder house and rotor have to be removed to replace it, well not anymore! Our 2 piece cradle installs and bolts together inside the combine so you can be up and running within an hour.

·Saves you time and money, and turns a nightmare into an easy job!

·\$2,000
