

Lego Therapy Social Group

Accepting new members!

Group for children ages 6-9 years old to improve communication and social skills through building Legos together

How does Lego Therapy work?

Lego therapy enables children to practice and improve communication and social skills in a fun way-by building Legos together! Children work together in small groups to construct a Lego kit. During each build, children practice giving and following instructions, communicating with others, sharing, and working as a team.
