State of California's Mandatory Lid Flipping Inspections

The City will begin its annual commercial route reviews on June 15 as required under the State of California's mandatory Short-Lived Climate Pollutant Reduction Strategy, SB 1383, organics recycling law. A consultant contracted by the City, Go2Zero, will conduct inspections through July 1, 2026, reviewing a random 3% sample of commercial accounts.

The work will include cart and bin inspections for both City-serviced commercial accounts and those served by permitted private haulers. Inspectors will leave printed tags on containers where contamination is found. Inspections help verify proper sorting, identify problem areas, and support those who may need assistance in meeting recycling and organics requirements. Tags will list the items identified, and City-serviced accounts will also receive contact information for follow-up.

Although SB 1383 allows fines for noncompliance, the City will continue prioritizing education, and no fines will be issued during this review cycle.

Approximately 190 City-serviced accounts and 150 private-hauler accounts will be included in the inspection sample.

Commercial accounts with questions about the process or future notices may contact the City at LBRecycles@longbeach.gov or their hauler, depending on their private hauler.

OOPS! ¡OH NO!

Oops! We found items that don't belong in your container(s). Please review the guidelines on the other side of this tag.

Encontramos artículos que no deben estar en su(s) contenedor(es). Por favor revise las guías al reverso de esta etiqueta.

EXCELLENT! ¡EXCELENTE!

Thank you for being a community leader! You placed the correct items in each of your carts.

¡Gracias por ser un líder comunitario! Colocó los artículos correctos en cada uno de sus contenedores.
