

Cleaning & Disinfecting Services

Coronavirus has quickly gained a reputation for being particularly insidious. It can survive on surfaces for up to a week and people infected by the virus don't show symptoms until approximately 2 weeks after infection, making it difficult to track and contain. One of the proactive steps every one can take is to clean and sanitize your environment by calling on an **AMPOL** Disinfecting Team. We use industrial-strength disinfectants with a broad spectrum killing claim which cannot be obtained by the ordinary public. Fully encapsulated personal protective equipment (PPE) and respirator masks are worn at all times by our certified technicians. Cleaning of visibly dirty surfaces followed by disinfection is a best practice measure for prevention of COVID-19 and other viral respiratory illnesses in community settings. **AMPOL** offers fast, effective and cost efficient cleaning and disinfecting of heavily trafficked commercial and industrial spaces.

WHERE WE DISINFECT

Production Facilities

Schools/Universities

Ships/Supply Vessels

Health Facilities

Work Offices

Super Markets

Transportation Centers

Refineries

On/Offshore Rigs

WE OFFER INDUSTRY LEADING DISINFECTION METHODS

- We have partnered with Safety Management Systems (SMS) to offer REAL-TIME documentation of the effectiveness of our methods. This in turn shows clients that disinfection is not only possible, but measurable on most surfaces.
- We utilize standard negative air HEPA filters that capture 99.97% of particles in the air, the filtered air is then directed through a UVC light box to sterilize any residual viruses.
