Extending Beyond-Use Dating and Batch Release Testing: Considerations for Your IV Room

An educational symposium sponsored by Omnicell

The practice of assigning beyond-use dates for compounded sterile preparations (CSPs) is complicated and often misunderstood. A CSP's beyond-use date identifies the time by which the preparation – once mixed – must be used before it is at risk for chemical degradation, contamination, and packaging permeability.

Join **Thomas C. Kupiec, PhD**, President and CEO of ARL Bio Pharma, to learn how hospital and health-system pharmacies can use stability and release testing data to improve the preparation and sustainability of sterile compounded drug products. This session will explain general considerations for extending beyond use dates and discuss batch release testing requirements.

DATE

December 5, 2017

TIME

5:30 p.m.

LOCATION

Rosen Centre Hotel,
Junior Ballroom F

1 hour CE provided (1.0 contact hour)

Hors d'oeuvres will be served. Seating is limited.

Please RSVP by
Friday, December 1
