

November 2021

Its officially the end of quarter 1!!! I am so proud of how hard 5th grade has been working these first few months of school. In Science, students became masters of lab safety. They also can successfully complete all steps of the Scientific Method. We ended our unit by completing the “dirty penny lab”, where students had to determine which solution could clean pennies best. Although we finished our Scientific Method Unit, we are not done with it yet. Within the next month or two, we will be starting our Science Fair projects. More information will go out about this shortly. Our 5th grade scholars continue to amaze me with their math skills. I always have awesome participation from students during class. It is also great to see when students can make connections between Math and Science during our lessons. Lets keep up the good work in quarter 2!

While we are in “FALL”, let our focus this term be about taking ownership of our learning, striving to improve daily and building consistency and academic confidence.

Thank you for being our partners in your scholars education.

Mrs. Macklin and Ms. Biehl
