Greetings Centaurs!

We have been working hard on completing the levels in Learning.com. I am also excited to announce we have installed web cameras in the computer lab. This will facilitate our K-2 graders to log in to Clever. Clever for those of you who are not familiar with it, it is a one stop software to all the websites we visit online. The students will use a badge to log in using the web cam.

3-5 graders have been learning new vocabulary words for Computer Science, polishing on their typing skills and we will be learning how to use Google sheets, which will help them with data and analysis, a must have skill as a computer scientist.

Our middle school scholars are working hard learning the basics of Python (a computer programming language). We have covered variables, and strings. Next month we will be moving forward to numbers as variables, lists and Boolean expressions, loops and so much more.

Congratulations to our Techies of the month!

Mrs. Noriega

(Technology/Computer Science Teacher)
