# SPEECH FLUENCY IN DOWN SYNDROME

## RESEARCH STUDY

## OBJECTIVE

We want to learn more about Down syndrome speech.

People with Down syndrome have unique speech patterns for language, articulation, and fluency that can sometimes lead parents, caregivers, and teachers to seek speech therapy.

Understanding more about common speech traits will help us to develop better approaches to support the communication needs of people with Down syndrome.

## WHAT IS INVOLVED?

1. Click on the Qualtrics link, or scan the QR code below, to read through a detailed description of the study before giving your consent.
2. Answer some quick questions about you, your speech and your family's speech. (5 - 10 mins).
3. Set up a video conference with a researcher, or record a video of you speaking with someone for 10 - 20 mins using a smartphone or other recording device.
