

[GAIN Clean Fuel](#), a brand of U.S. Gain, has been a Wisconsin Clean Cities member since 2011. Scott Hanstedt, director of sales, serves on the Wisconsin Clean Cities board of directors.

Farmers, landfill owners and municipalities across the nation have partnered with energy developers like U.S. Gain to transform their waste into clean, [renewable natural gas \(RNG\)](#) thanks to government-backed clean fuel programs and growing corporate demand for sustainable energy solutions.

Does your renewable natural gas development project need support, or do you simply want to learn more? As a vertically integrated renewable natural gas supplier involved with more than 20 projects, U.S. Gain can help. Its project development, financial strength, compliance expertise and pathway to the transportation and energy markets will expedite your project's approval and return on investment.

The company works with best-in-class partners to build, operate and maintain [alternative fuel stations](#) across the country that feature unprecedented quality and performance. As your partner, representatives will discuss options to determine your ideal fueling experience, while balancing budget and capacity. U.S. Gain's meticulous attention to detail means your station will be designed to specifications on time and within budget.

The team of tenured, in-house engineers will design a station, or network of stations, tailored exclusively for your applications. They will take the time to understand not only current fueling needs, but also factor in growth inclusive of fleet size and fuels used to design a station that will expand with your business. With experience installing stations in most states, U.S. Gain is versed in the permitting process and regional regulations. Gain Clean Fuel stations are known for industry-leading up time, performance and quality, stemming from the meticulous attention to detail devoted to every aspect of the build process. Aligned with best-in-class providers, rest assured your station project will be handled with the utmost professionalism, coming in both on time and budget.

Transitioning to alternative fuel shouldn't extend your route. Strategically located near major shipping corridors, the [GAIN Clean Fuel natural gas station network](#) is easily accessible for all natural gas vehicles — from passenger cars to class 8 trucks. Featuring 99% site up time, we're your partner with the most reliable natural gas station network.
