## Job Recall

Load previous cleaning job from Library for 100% FULLY AUTOMATED Tube Bundle "Smart Clean"

# How Does It Work?

## Lunch Box

The central platform for touch-screen tablet control, the patented Lunch Box is the command center for the tube bundle cleaning system via wireless Bluetooth.

## Data Collection

Software on the tablet records every command from the Lunch Box, even precise location of each tube! By recalling this information from the saved Library, this useful information can be applied for 100% Fully Automated "Smart Clean".

## Smart Indexing

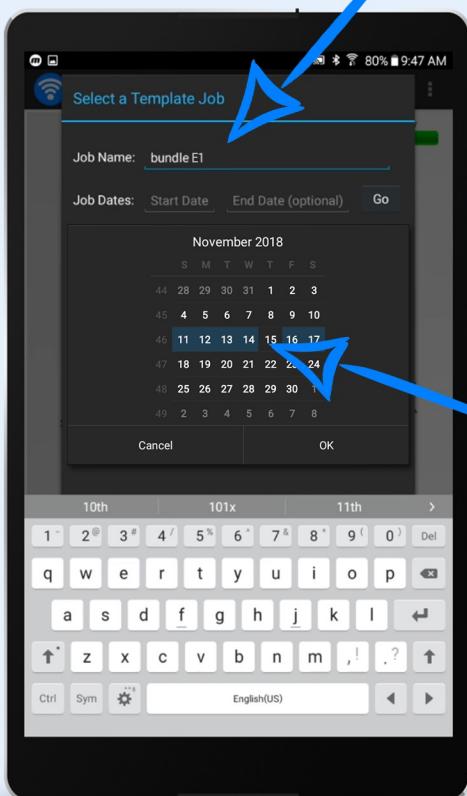

Accurate and consistent navigation tube-to-tube previously performed with a single click of a button, patented Smart Indexing now uses the recalled library job to navigate to each tube(s) without a command from the end-user.

## Smart Feed

Accurate and consistent delivery of the lance(s) previously performed with a single click of a button, Smart Feed now automatically performs the lance(s) forward and reverse feed sequence following each Smart Indexing navigation. Plug Detection Technology detects plugged tubes and automatically engages Pecking Cycle.

### Step 1:

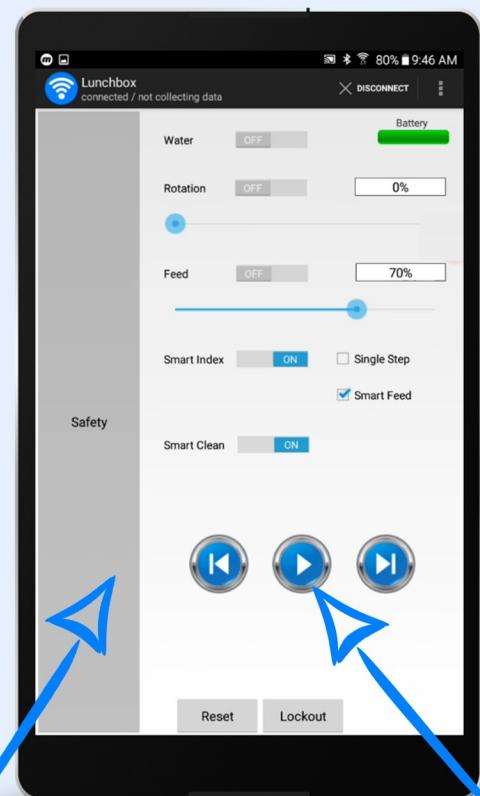

Locate job(s) from Library by entering name of cleaning job\*

- or -

Locate job(s) from Library by selecting date of cleaning job\*

### Step 2:

\* Active or completed jobs can be transferred from device to device via wireless Bluetooth in a matter of seconds. No cables or flash drives!

Press-and-hold the Safety Dead-man Switch, then select the "Play" Button to perform 100% Fully Automated "Smart Clean"!
