

Clean, Drain and Dry – Keep Our Lake Free of Aquatic Invasives

All paddlers who bring their own boats to the ACA Camp must clean, drain, and dry them before putting them into Lake Sebago.

This will keep our lake free of invasive plants and animals, which have seriously damaged the ecosystems of many lakes across the country.

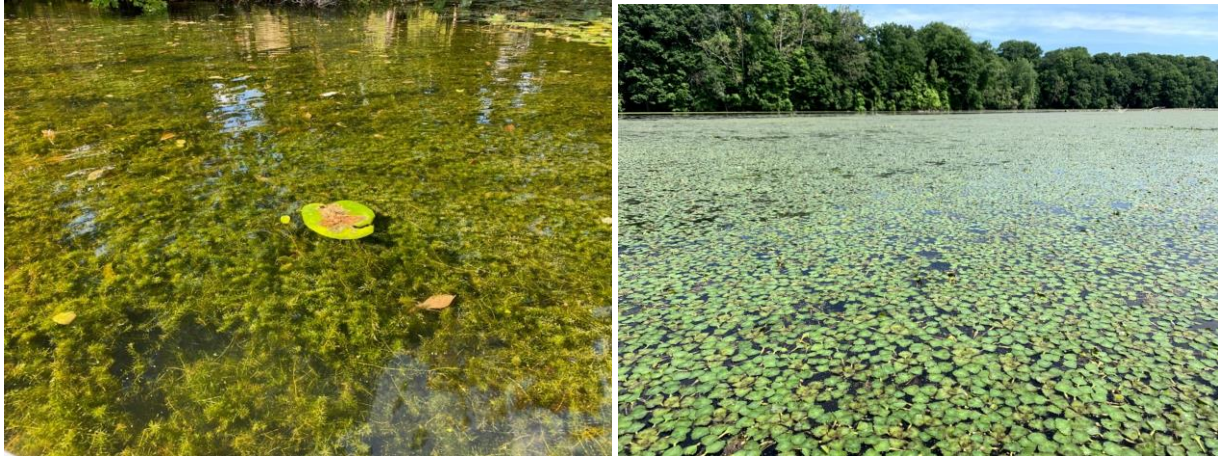

Photo on left is of a water chestnut infestation in a lake in New York; image on right is of a hydrilla infestation in Orange County, New York. This is what happens when an AIS situation gets out of control. Photos courtesy Lindsay Yoder, Lower Hudson, PRISM.

For more information on Aquatic Invasive Species, please click [here](#).

Click [here](#) to watch the Lake Sebago AIS strategy session with Mark Granger of the Schroon Lake Association and Lindsay Yoder, AIS coordinator for the Lower Hudson PRISM. This event was held over Zoom on April 12, 2021 and was organized by Loren Edelson and Erin Thelen, past and current directors of conservation and public policy for the Atlantic Division of the American Canoe Association.
