Calculating Your Rate

The rate for an individual is calculated according to his or her age bracket. For example, a 40-year-old individual who would like to enroll in the MedMutual Accident 2000 plan would have a monthly rate of \$9.02.

The rate for a family is calculated by adding the individual rates of each family member according to his or her age bracket. For example, a 40-year-old individual would like to enroll his family in the MedMutual Accident 2000 plan. The family consists of a 35-year-old spouse and two children. The rate would be calculated as follows:

- \$9.02 for the 40-year-old primary policyholder
- \$9.12 for the 35-year-old spouse
- \$10.29 for each child

The total monthly rate for the family would be:

$$\$9.02 + \$9.12 + \$10.29 + \$10.29 = \$38.72$$
