

Fare Calculation Software

MOBILEvario

Benefits

For Agencies

Transit agencies need complete control over their sales processes. With INIT's back-office fare management system, MOBILEvario, agencies can offer best price fare calculation. Riders pay as they go and receive the same benefits as pass holders once they reach the cap.

MOBILEvario provides real-time fare processing, supports credit and debit card payments, and is easy and fast to deploy. Its open architecture and **'Visa Ready for Transit' certification** are key advantages for agencies delivering today's digital payment services.

For Riders

Riders want **contactless, secure, and convenient** solutions when taking public transit. With open loop fare systems, they can tap and go using any payment form and enjoy freedom from worrying about which ticket to buy.

Open loop payments allow riders to board quickly using credit/debit cards, or smart wearables and mobile wallets. Making fare payments faster and more convenient helps riders feel more confident about taking public transit.

For Drivers

With contactless payments, drivers are free from the burden of selling tickets, providing change, or having to deal with other fare-related challenges. MOBILEvario delivers no-hassle fare validations, allowing drivers to focus on what they do best: providing reliable, on-time service.
