## **PCR Cycle Threshold in Canada**

The RT-PCR test amplifies RNA. The number of amplifications is called the cycle threshold.

This July 2020 report shows that [Canada is using cycle thresholds up to 45](#). As you'll see from Portugal court documents and expert reports, anything over 30 is unreliable. Kerry Mullis who developed the RT-PCR test stated that it should never be used to diagnose and that anything over 25 cycles is meaningless. Anthony Fauci says anything over 35 cycles is not reproducible.

**Real-time PCR-based SARS-CoV-2 detection in Canadian laboratories**, Journal of Clinical Virology, July 2020

<https://www.sciencedirect.com/science/article/pii/S138665322030175X>

[Chart shows cycle threshold of up to 45 in Canada.](#)

Cycles of [35 and 40](#) being used in BC.

Cycles of [38-45](#) being used in Ontario.

--

## **Portuguese Appeals Court Deems PCR Tests Unreliable**

A recent court decision in Portugal found that the RT-PCR tests are [97% inaccurate](#) at the cycle thresholds being used.

## **Portuguese Appeals Court Deems PCR Tests Unreliable**

[https://www.uticaphoenix.net/2020/11/17/portuguese-appeals-court-deems-pcr-tests-unreliable/?fbclid=IwARoDZw\\_HCj\\_aSNIl2Xoaxu9MKzKvhd6NN7\\_SAeqDGm4NUzyy3ZmwMy3jnA](https://www.uticaphoenix.net/2020/11/17/portuguese-appeals-court-deems-pcr-tests-unreliable/?fbclid=IwARoDZw_HCj_aSNIl2Xoaxu9MKzKvhd6NN7_SAeqDGm4NUzyy3ZmwMy3jnA)

*On November 11, 2020, a Portuguese appeal court ruled it was unlawful to quarantine people based solely on a PCR test.*

*The court stated, the test's reliability depends on the number of cycles used and the viral load present. Citing Jaafar et al. 2020, the court concludes that "if someone is tested by PCR as positive when a threshold of 35 cycles or higher is used (as is the rule in most laboratories in Europe and the US), the probability that said person is infected is less than 3%, and the probability that said result is a false positive is 97%."*

*In the US, the FDA's instructions for PCR testing recommends a threshold of 40 cycles for a specimen to be considered positive.*

*At 25 cycles the original material has been multiplied 33,554,432 times.*

*At 30 cycles the original material has been multiplied 1,073,741,824 times.*

*At 40 cycles the original material has been multiplied 1,099,511,627,776 times.*

*As you can see there is quite a difference in magnification at various cycle thresholds.*

*It is also important to remember PCR was invented as a way to create copies of genetic material.*

*It was never intended to be a diagnostic tool.*

--

**Portuguese Court Rules PCR Tests “Unreliable” & Quarantines “Unlawful” Important legal decision faces total media blackout in Western world, November 20, 2020**

<https://off-guardian.org/2020/11/20/portuguese-court-rules-pcr-tests-unreliable-quarantines-unlawful/>

*An appeals court in Portugal has ruled that the PCR process is not a reliable test for Sars-Cov-2, and therefore any enforced quarantine based on those test results is unlawful.*

*Further, the ruling suggested that **any forced quarantine applied to healthy people could be a violation of their fundamental right to liberty.***

*Most importantly, the judges ruled that **a single positive PCR test cannot be used as an effective diagnosis of infection.***

*In their ruling, judges Margarida Ramos de Almeida and Ana Paramés referred to several scientific studies. Most notably this study by Jaafar et al., which found that – **when running PCR tests with 35 cycles or more – the accuracy dropped to 3%, meaning up to 97% of positive results could be false positives.***

*The ruling goes on to conclude that, based on the science they read, **any PCR test using over 25 cycles is totally unreliable.** Governments and private labs have been very tight-lipped about the exact number of cycles they run when PCR testing, but it is known to sometimes be **as high as 45.** Even fearmonger-in-chief Anthony Fauci has publicly stated **anything over 35 is totally unusable.***

**PCR positives: what do they mean?** published in The Centre for Evidence Based Medicine, September 17, 2020

<https://www.cebm.net/covid-19/pcr-positives-what-do-they-mean/>

**“Cycle thresholds are the times that the amplifying test has to be repeated to get a positive result. The higher the viral concentration the lower amplification cycles are necessary.”**

**“PCR detection of viruses is helpful so long as its limitations are understood; while it detects RNA in minute quantities, caution needs to be applied to the results as it often does not detect infectious virus.”**

The Centre for Evidence-Based Medicine (CEBM) says<sup>[1, 2]</sup>:

“PCR detection of viruses is helpful so long as its accuracy can be understood: it offers the capacity to detect RNA in minute quantities, but whether that RNA represents infectious virus may not be clear.”

--

**COVID19 PCR Tests are Scientifically Meaningless Though the whole world relies on RT-PCR to “diagnose” Sars-Cov-2 infection, the science is clear: they are not fit for purpose, June 27, 2020**

<https://off-guardian.org/2020/06/27/covid19-pcr-tests-are-scientifically-meaningless/>

--

A recent review of the Corman-Drosten paper (January 2020) which purported the RT-PCR as the standard for SARS CoV-2 is asking that that paper be retracted citing 10 serious flaws.

*“In light of our re-examination of the test protocol to identify SARS-CoV-2 described in the Corman-Drosten paper we have identified concerning errors and inherent fallacies which render the SARS-CoV-2 PCR test useless.”*

**Review report Corman-Drosten et al. Eurosurveillance 2020, November 27, 2020**

External peer review of the RTPCR test to detect SARS-CoV-2 reveals 10 major scientific flaws at the molecular and methodological level: consequences for false positive results.
