

Suggested Alternatives for COVID Disinfectants

Product	Dilution (if necessary)	Duration on surface	Notes
Alcohol (isopropanol or ethanol): 60-70% final concentration.	many products sold commercially are ALREADY diluted.	30 seconds	Stable for multiple days
Hydrogen Peroxide (3%)	N/A	1 minute	Requires no dilution
Chlorine bleach (sodium hypochlorite)	1:50 Bleach to water	1 minute	Requires daily preparation, can be caustic and irritating
Quaternary ammonium compounds, aka quats (e.g. benzalkonium, Lysol)	N/A	3 minutes	

*Please note that many commercially available disinfectants are effective against SARS-Cov2. Please adhere to contact time directions per manufacturer when using these products.
