

## Do you serve as the primary caregiver for a family member or friend living with dementia?

Help us understand your dementia caregiving experience during the COVID-19 pandemic and how it impacts your health by participating in the **STYLE Caregiving During COVID-19** study (study number HUM00132938)! We're doing a research study to learn more about how family and friend caregivers manage care for a relative with dementia during COVID-19, and how the pandemic and shelter-in-place policies impact caregivers' mental health and health services use.

### You may be eligible to participate if you are:

- ☐ The primary caregiver of a family member or friend diagnosed with dementia
- ☐ 18 years of age or older
- ☐ Your care recipient is not living in a long-term care facility and has a life expectancy of greater than 6 months

Volunteers will be asked to participate in a web survey and phone or virtual interview. Clear, simple instructions provided! Participants will receive a \$45 stipend for their participation.
