

## **THE SECRET LIFE OF AIRPLANES**

Presented by Dan Truesdell

Have you ever wondered why airliners are round? Or, what it means to “pull Gs”? Or, why there is a little wing on the front of some planes?

This presentation will answer these questions and more. Join us to learn about lesser-known aspects of air travel, such as how planes fly, how they are controlled, and characteristics of flights like stalls, spins, and go-arounds (and why they are not as scary as they may seem). We'll also review other logistics of flying, including why the loss of power doesn't turn your plane into a lawn dart.

Bring your questions for a lively discussion!

**THURSDAY, APRIL 10  
3:00 PM**

**AIL CLASSROOM,  
LETHBRIDGE LODGE**

**MEMBERS – \$10  
NON-MEMBERS – \$15**
