The CNR H-6-d and H-6-g class 4-6-0 was one iconic steam locomotive. Built by Montreal Locomotive Works for the Canadian Northern Railway, these 4-6-0s were a light, general-purpose locomotive perfectly suited for freight or passenger work across the entire CNR system. Their smaller wheel configuration made them very versatile and well liked.

Our model represents two H6 subclasses: the 20 H-6-d versions in the 1323 to 1342 number series, and the 56 H-6-g types, numbered 1354 to 1409. These two subclasses were largely identical in specifications and dimensions. Over the years, several modifications were made to the class which created some visual differences amongst the two classes. Some of these changes include new steel cabs, replacing the older wood design, coal to oil burner on some of the fleet and wooden plank extensions on the tender bunkers of the H6s that were not converted to oil.

The H-6-d and H-6-gs lasted in regular service until the late-1950s, with four being preserved. H-6-g 1392 continues to run at the Alberta Railway Museum. Number 1551 (ex-1354) operated on the Ohio Central and is now stored at the Age of Steam Roundhouse in Ohio.

THE 4-6-0 CLASS H-6-d AND H-6-g STEAM LOCOMOTIVES FEATURE:

- Coal (with or without extended bunker) and Oil tenders
- Wood or steel cabs
- Manual or power reversers
- Vertical or horizontal slat pilots
- Two different bell locations
- Two different headlight sizes
- Factory-applied details specific for each road number
- Smooth-running drive & heavy diecast weight centered above the drivers for exceptional pulling power
- Blackened metal wheels and driving rods
- Working head, marker and classification lights, as well as a flickering firebox light
- DCC sound version includes synchronized chuff, accurate whistle, bell and many other effects!
- Accurate and complete piping, underbody and tender details
- Designed from blueprints and field measurements
- Accurate paint and decoration
- 18" Minimum radius (22" recommended)
