The RDC is back! And now for the first time in plastic Rapido proudly presents the unique RDC-9! The Budd RDC-9 was introduced in 1956 for the Boston & Maine as a "powered trailer", designed for use with two regular RDCs in a three car consist. It was a motorized coach powered by a single motor and containing seating for 94 passengers. Lacking control cabs or end windows, it was not designed for independent operation but was controlled by controls in a coupled RDC. Most of the RDC-9 fleet was sold to CN and regularly operating in Canada for VIA Rail until 1988!

In addition, we also have the RDC that started it all: The RDC-1 in a buffet of new schemes. Many of these RDC-1s were built or made their way into commuter service, well into the 1990s. This run will cover some of those operations with a wide variety of attractive schemes.

For more history on the RDCs, check out our Masterclass, which gives an in-depth look on these venerable rail cars.

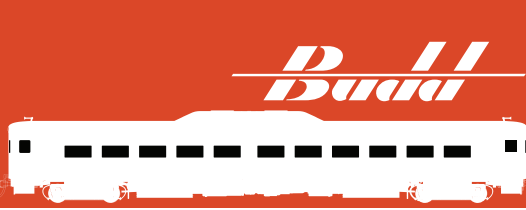

The RDC-1 and -9 Features:

- VIA Rail rebuilt RDCs feature correct blanked ends, steps and xenon lights
- Rapido's acclaimed "stainless steel" finish
- Separate underframe piping and conduit
- Loads of roadname-specific details
- Fabricated or cast truck sideframes (as appropriate)
- Separate grab irons and front door chains
- Etched-metal roof grills and fan covers
- Lit number boards and class lights
- DC/Silent (21-pin DCC Ready) or DC/DCC/ESU LokSound
- Correct engine sounds (as appropriate)
- MoPower capacitor system for uninterrupted DCC power
