The popular N scale Comet Cars make a triumphant return with new schemes!

The "Comet Cars" might be the most recognizable commuter rail car in North America. The original Comets were designed by Pullman-Standard for NJDOT (Erie-Lackawanna operated commuter services). In the early 1980s, Bombardier acquired the rights to continue building these cars with an order for NJ TRANSIT, successor to the NJDOT and E-L. Followup orders would be placed by Massachusetts Bay Transit Authority (MBTA), Metro-North and Société de transport de la Communauté urbaine de Montréal (STCUM) which would later become Agence métropolitaine de transport (AMT). Most of these cars are still in service today, either in their original form or having been rebuilt over the years. In 2025 MBTA would wrap a coach into a special Massachusetts 250th anniversary scheme honoring the Revolutionary War.

Many commuter agencies use similar-like rail cars. These schemes have adapted very nicely to the Comet car design!

The N Comet Car features:

- Full underbody and interior details
- Correct Inside-bearing trucks with metal wheelsets
- Accurate and tinted windows
- Fully controllable interior and exterior lighting including marker lights, headlights and ditch lights
- All-wheel electrical pickup means constant lighting on both DC and DCC layouts
- Suggested minimum radius: 14"
