

If you tested positive for COVID-19

If you had a positive COVID-19 test or were diagnosed with COVID-19, you must stay home, except to get needed medical care. Everyone must stay home who tests positive for COVID-19, even if you are vaccinated, have no symptoms or were recently (within the last 90 days) infected and recovered. You must stay home until all of the following are true:

- At least five (5) days have passed since your symptom(s) started AND
- You no longer have fevers, AND
- Your other symptoms are getting better, AND
- You have a negative test* collected on day 5 or later

Wear a well-fitting mask around others, indoors and outdoors, for a total of 10 days.

If you never had any symptoms, you must stay home for five (5) days after your positive test. If you are unable to test or choose not to test, you can end isolation after day ten (10).

These guidelines apply to kids who test positive for COVID-19. Kids may return to school when they meet the rules above.

*Either an antigen or PCR test is fine, but an antigen test is preferred to leave isolation or in people who have had a recent COVID-19 infection. Over the counter tests are acceptable to end isolation or quarantine.
