

4 Reasons Why Cleaning and Maintaining Your Shotgun Is Important!

- 1.) Longevity - Simple maintenance and cleaning can make sure your gun will last for generations.
- 2.) Cleaning and maintaining your gun will help you learn about how the gun works. You'll learn how the parts interact with each other.
- 3.) Learn to Lubricate Your Gun. More lubrication is not always a good thing when you're maintaining your gun. When the moving parts of your gun have too much lubrication there will be some issues such as excess dirt build up.
- 4.) Safety and Reliability - After you've used your shotgun, you should always clean it so it's ready to function perfectly the next time.

Steps to Cleaning;

- A. Make sure the firearm is unloaded; disassemble to clean the different parts of the gun.
- B. Clean the inside of the barrel with a bore snake or cleaning rod and gun solvent, Crud Buster works really well.
- C. Wipe the outside of the barrel with a light oil, we recommend G96.
- D. Lube or grease. G96 Gun Treatment works well for areas where that is required
(this will depend on the type of shotgun you are cleaning)
- E. Use a light oil on the barrel and receiver which will help prevent rusting, with the G96 Gun treatment.

Reassemble your gun and make a booking to shoot at Silver Willow !
