# FALL SEMESTER INTERNSHIP

Flowstate is using data science and machine learning to develop leak detection solutions for oil pipelines.
We are using modern technologies to put data to use for our customers.

We are looking for a part-time, fall semester intern that will provide support to our software, research & development, and operations teams.
The primary focus of this position will be work on our data visualization tools - although tasks may range from the well-defined to the random and spontaneous!

What you will do

- Create data vis dashboards in Grafana
- Create and optimize solutions to access and deliver data to end users
- Research new visualization options
- Help diagnose and troubleshoot issues with our visualization suite
- Become familiar with the software development cycle and help to manage associated tasks

Send your resume to
jobs@flowstatesolutions.ai
Or learn more at flowstatesolutions.ai

Skills you will need

Familiarity with or ability to learn:

- Visualization tools (Grafana, Looker, Tableau, Power BI)
- SQL Querying
- Structured databases and semi-structured data
