

# Training Opportunities: Tobacco Use & Trauma Informed Care

Studies show that tobacco use is highly correlated with childhood trauma - join the MaineHealth Center for Tobacco Independence for two professional development opportunities on this issue. CMEs are available to attendees of both live events. Learn more at [CTIMaine.org](https://CTIMaine.org)

## WEBINAR

● SEPT ●

25

**Adverse Childhood Experiences (ACEs), Tobacco Use and Trauma-Informed Treatment Approaches**

**12-1PM**

**Webinar will be recorded and made available**

It is known that adverse childhood experiences (ACEs) are associated with an increased risk for addictions later in life. This webinar will explore the topic of childhood adversity and trauma and their association with tobacco use disorder, including how the issue looks in Maine. The webinar will further discuss trauma-informed treatment considerations for working with those who use tobacco and may have a history of childhood adversity.

Presented by: Jennifer Noel, LCSW, NCTTP – Tobacco Treatment Educator, MaineHealth Center for Tobacco Independence

## WORKSHOP

● OCT ●

23

**The Why and How of Trauma-Informed Care: A Life Course Approach to Understanding the Trajectory of Tobacco Use**

**8AM-3PM**

**The Samoset Rockland, ME**

This full day workshop will provide an overview of the ACEs science and evidence demonstrating the long-term consequences of early life adversity on tobacco use. The workshop will introduce trauma-informed care principles and practices and the importance of integration into tobacco cessation and prevention programs.

About the Presenter: Dr. Shanta R. Dube is Associate Professor at Georgia State University. In 1999, she joined the CDC as one of the early investigators on the Adverse Childhood Experiences (ACE) Study and has been actively engaged in ACE research for two decades.
