

LAKEVIEW AVENUE BRIDGE CONSTRUCTION PROCESS

1

FOUNDATION CONSTRUCTION

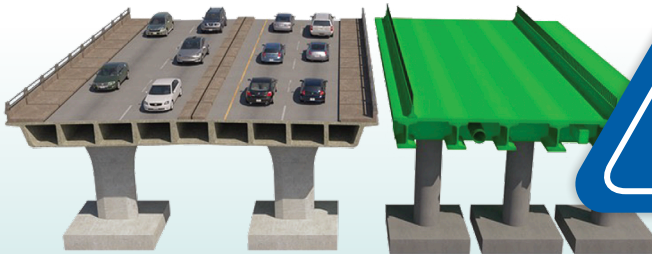

Crews install foundations and support columns to one side of the existing bridge, allowing it to remain open and traffic to continue flowing.

2

PARTIAL SUBSTRUCTURE COMPLETED

A new bridge deck is built on the foundation and opened to traffic, allowing a smooth shift onto the new structure.

3

OLD BRIDGE DEMOLITION

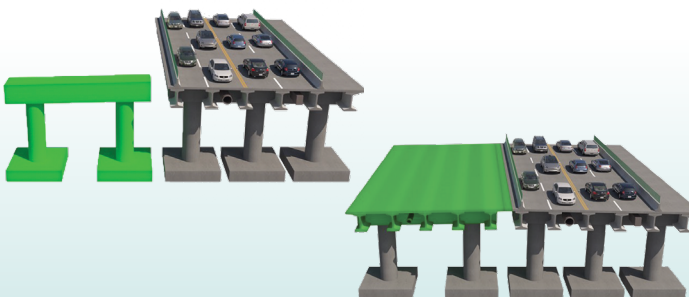

The original bridge structure is removed.

4

SECOND HALF CONSTRUCTION & CONNECTION

The second half of the new bridge is built where the old bridge stood, then both halves are joined into a single seamless structure.

5

FINAL TOUCHES & FULL ACCESS

Final elements like paving, striping, barriers, and lighting are installed, and the bridge fully opens to traffic in both directions.
