The Department of Environmental Protection's Emergency Final Orders authorizes certain post-storm activities for debris removal, minor repairs, major repairs, restoring beach access, placing beach compatible sand, coastal protection and temporary flooding relief seaward of the State of Florida Coastal Construction Control Line (CCCL, also known as a setback line). These orders do not approve:

- new permanent structures that did not exist prior to the coastal storm emergency;
- installation of geotextile containers as the core of a reconstructed dune for the purposes of temporary armoring;
- beach scraping performed by itself or in association with any other activities; or
- harm to endangered or threatened species of wildlife such as nesting sea turtles.

A City of Naples Coastal Construction Setback Line (CCSL) Field Permit is required for many post-storm activities, while some are exempt. Please refer to the Florida Department of Environmental Protection CCCL Post Storm Public Information Handout for the full list of activities ([Click here](#)). Two common activities needing a local permit are listed below.

To return storm **overwashed** sand (sand that was deposited on the upland by the storm) back to the beach or dune area:

- Sand must be cleaned of storm or construction debris prior to relocation.
- No beach scraping is allowed.
- No dune or dune vegetation damage is allowed.
- Place sand in barren areas with no debris or plants
- Excavation is not to go below pre-storm ground levels.
- Use existing beach access points.

*\*Note: Return of **clean windblown** sand to the beach from paved roads and parking areas, beach access ramps, pools, patios, walkways, or decks is exempt from CCCL permit requirements*

Repair of dune walkovers and beach access ramps; replacement of damaged stair stringers and treads, support posts, stringers, bents handrails and decking:

- Minor repairs only, structure cannot be substantially damaged\*.
- Adjust seaward end for changed beach conditions.
- No damage to dune or dune vegetation is allowed.

*\*Substantially Damaged – refers to structures which are no longer functionally intact or for which the repair cost is 50 percent or more of the structure's market value before emergency occurred.*

If dewatering must occur, please make every effort to follow Best Management Practices' and avoid direct discharge into waterways or storm drains. Limit discharge water to grassy areas or swales to allow percolations into the ground prior to discharge. Please see Collier County Pollution Control Dewatering Protocol ([link below](#)) for additional resources.
