

March Chamber Member Spotlight – Madilene’s Piano Tuning & Repair

Madilene’s Piano Tuning & Repair provides professional piano tuning and repair services in homes, schools, universities, churches and concert venues in Walker and surrounding counties since 2004. Owner and Certified Piano Technician Madilene Loosier shared, “We use state of the art tuning software, along with a trained ear, to create the best possible tuning for our clients’ pianos. Educating our clients with information about their instrument and how to take care of it, gives them the knowledge to make the best choices to enjoy their piano for many years.” In addition to tuning, pianos require maintenance to keep them performing at their optimum potential. Over time, the felts in a piano action compress and it loses its responsiveness when attempting to play loud and soft passages. Action regulating accomplishes this goal. We provide complete piano cleaning, string repairs, and new action parts such as hammers, damper felts and keytops, to name a few. In addition, we perform purchase evaluations, appraisals and voicing. As a Certified Dampp-Chaser installer, we can evaluate your piano for tuning instability issues and recommend and install a Piano Life Saver System to combat humidity fluctuations that can cause a piano to go out of tune.”

“I have met so many wonderful people and formed long term relationships with many piano owners in our community. I joined the Chamber soon after starting my business and I appreciate that it has allowed for networking and provided many training opportunities over the years to grow my business. I am especially grateful to our chamber for the immense support and zoom meetings with leaders during the COVID shutdown in April 2020 and following, that provided a much needed lifeline so many of us needed at that time!”
