

# Right-Sized Management: Admin High Risk Pre-Conference

## Right-Sized Management: Creating and Sustaining a High-Risk Breast Program at Any Center

Stephanie L. Graff, MD, FACP & Danielle Rogers, NP-C, AOCNP, ACGN, CGRA

We believe personalized breast cancer risk assessments and cancer screening should happen in major metropolitan regions and rural communities, in suburbs and urban cores, in communities of all backgrounds. As such, we hope this course helps you develop comprehensive, sustainable, cost-effective high-risk breast care for the unique communities you serve. Program models vary significantly depending on the size, model, resources, and goals of the program. Understanding the foundational infrastructure and critical resources will help you develop or grow a High-Risk Breast Program to fit the needs of your patient community most uniquely. Course designed for administrators and clinicians alike engaged in the development of comprehensive High-Risk Breast Programs including imaging, genetics, and management, from identification and assessment to management and long-term care.

## Friday, March 15

|                  |                                                                                                                                                                                                                                                                                                                                                             |                                                                                                              |
