

# Online Session

## Enhanced Hepatitis C Virus Screening and Testing Calculator

Hepatitis C virus (HCV) disproportionately affects communities and populations served by Community Health Centers (CHCs). Health centers are uniquely positioned to provide comprehensive health services including HCV testing, linkage to care and treatment. Over the past several years, the National Nurse-Led Care Consortium (NNCC) has partnered with a variety of health centers across the country to implement an opt-out, medical assistant-led HCV screening and treatment program. Through this work, we helped develop an online cost calculator that health centers can use to determine the return on investment for adopting the opt-out model with a goal of demonstrating the financial feasibility of universal testing for HCV.

Please join NNCC on Wednesday, November 13th at 11am ET for a live demonstration of our online return on investment calculator. This session will provide an overview of the calculator and solicit feedback from participants about its use.

### AUDIENCE

Healthcare staff: QI and Practice Managers, Providers, Nurses, Medical Assistants, Front Desk Staff, EMR System Administrators, QI Managers
