Millennium Access Control System

Version: 8.15.0 | **Release Date:** October 2025

Highlights

This release delivers key feature enhancements and performance improvements across the Millennium Access Control platform. Users will benefit from faster data archiving, enhanced device visibility, and improved visitor management workflows. Several issues identified in previous builds have been resolved to ensure a smoother and more reliable experience.

New Features and Enhancements

Increased Historical Log Archiving Timeout
Archiving large data volumes is now more reliable with an extended timeout limit. This enhancement reduces timeouts during long-running processes, improving overall system stability.

Device Map Enhancements
Devices are now automatically sorted even when no tenant license is applied, improving visibility and user experience within the system map.

Create Card for UMC Visitor
Administrators can now create visitor access cards directly in the UMC interface, streamlining visitor management and reducing manual setup time.

Delete Visitor from UMC Application
A new administrative function allows the removal of visitor records from within the UMC Application, enabling more accurate and compliant data management.

Resolved Issues

Cardholder Import
Fixed an issue where NULL values in imported cardholder data did not remove access levels correctly.

Record Creation in Visitors and Cars Tabs
Resolved an error that occurred when adding new entries in these sections.

Threat Levels Settings Validation
Corrected validation inconsistencies that occasionally caused record creation failures.

UMC Module Connection Status
Fixed an issue where the connection status of blocked UMC modules was not visible in the 'Restart Communicators' tab.

Add Site and Doors Function
Resolved an error triggered when using the 'Add site and doors' command.

Localization in Cardholders Tab
All content is now fully localized to ensure consistency across supported languages.

Mobile Tokens Display
Corrected text formatting to display abbreviations in uppercase for consistency.

Data Charts Text
Fixed incorrect message text that appeared under certain conditions in the 'Data Charts' tab.

Dashboard Command Execution
Resolved an issue that caused unintended command execution within the 'Dashboard' tab.

Availability and Licensing

Some features introduced in this release are available only through licensed or paid feature sets. Please contact your Millennium Group account representative or system administrator for licensing details.

Support and Resources
