## **COVID-19: Quarantine vs. Isolation**

QUARANTINE keeps someone who was in close contact with someone who has COVID-19 away from others.

If you had close contact with a person who has COVID-19

Stay home until 14 days after your last contact.

 Check your temperature twice a day and watch for symptoms of COVID-19.

 If possible, stay away from people who are at higher-risk for getting very sick from COVID-19. ISOLATION keeps someone who is sick or tested positive for COVID-19 without symptoms away from others, even in their own home.

If you are sick and think or know you have COVID-19

- Stay home until after
  - At least 10 days since symptoms first appeared and
  - At least 24 hours with no fever without fever-reducing medication and
  - Symptoms have improved

If you tested positive for COVID-19 but do not have symptoms

- Stay home until after
  - 10 days have passed since your positive test

If you live with others, stay in a specific "sick room" or area and away from other people or animals, including pets. Use a separate bathroom, if available.
