## **Important Tips Regarding Outdoor Gear**

#### **Trip Safety**

The gear list is based on 30 years of experience taking students on wilderness adventures. Our number one concern is the safety of our students on our expeditions. The required equipment and clothing on this list forms the fundamental basis of that protection from the elements.

#### **Equipment Sources**

SBMS Warehouse offers GREAT prices on equipment and clothing. Online sources include: Backcountry.com, rei.com campmor.com cabelas.com

### Packing

- <u>Luggage Limits</u> All gear (clothing, toiletries, tent, sleeping bag, sleeping pad, spare parts) must fit into two Ortlieb duffels.
- <u>Personalize Your Duffels</u> Make it easy to spot your duffels by tying a unique bandana
  or piece of fabric to the handles. Write your name on the outside, but remember you may
  want to take these great duffels to college, so don't do any decorating you may outgrow.
- <u>Label EVERYTHING!</u> Use Sharpie markers, metal markers, sew-on tags, finger nail
  polish to label duffels, stuff sacks, clothing, toiletries, all parts of your tent, sleeping bags,
  sleeping pads, mess kit parts, bike gear, bike tools, water bottles. If you bring it, label it.
  If you lose it, it may show up in "dorkage" (SBMS Lost & Found). Unclaimed dorkage is
  given away.
- Packing & Storing Sleeping Bags & Pads Pack in the smallest stuff sack
  possible--compression sacks make repacking sleeping bags easier. At home, always
  store your sleeping bag un-stuffed or in a large, loose breathable bag so it does not lose
  its loft and thus its warmth. Sleeping pads should be stored unrolled or loosely folded
  with valves open.
- <u>Pack Light</u> Include just the items listed on the packing list. Clothes can be washed by hand during the trip as needed.
- <u>Get Organized</u> Stuff sacks, zippered pouches, mesh cubes and Ziplock bags are great for organizing your gear within your duffel bags.
- <u>Technical clothes</u> are made of fast drying, moisture wicking fabrics. Examples of these recommended fabrics include Capiline, polypropoline, and wool. There are now many other high tech fabrics on the market, some with build-in sun protection. The key is that the fabric is comfortable, hard-wearing and wicks moisture.
