

## FULL TIME QA-QC LABORATORY TECHNICIAN

---

Established biotech company in Bozeman is seeking a highly motivated individual with a positive attitude to join a fast-paced, results-oriented research and development lab. Project management skills, rigorous attention to detail and the ability to occasionally work outside of regular business hours is required.

### Responsibilities

- QA/QC for cell-based assay products.
- Maintain high quality mammalian cell lines.
- Perform cell-based micro plate assays.
- Maintain Sf9 cells for baculovirus production.
- Maintain inventory of lab supplies.
- Conduct preventative maintenance on lab equipment.
- Maintain detailed lab notebooks.
- Present at and participate in weekly lab meetings.
- Follow established laboratory protocols to ensure high quality results.
- Draft protocols, experimental plans and other scientific documents.
- Other responsibilities may be necessary in a dynamic environment with changing priorities.

### Qualifications

Bachelor's degree in the biological sciences or related field is required. 1-2 years experience in a rigorous scientific environment is preferred. Must be knowledgeable about scientific methods, and familiar with instruments routinely used in molecular and cell biology. Strong analytical/problem-solving skills and a demonstrated ability to collect, interpret and report technical information is required. Knowledge and experience with GLP/GMP/GDP is desired. Attention to detail and organizational skills to handle multiple parallel projects is essential. Industry experience is preferred.

### Physical Demands

While performing the duties of this job, the employee is required to sit or stand for prolonged periods. The employee is frequently required to talk and hear; use hands to handle or feel; reach with hands and arms above shoulder height and below the waist. Employee must be able to lift up to 30 lbs with properly lifting techniques.
