

**ALWAYS LOVE YOURSELF!**

## February President's Letter

Hello NAWIC Silicon Valley Chapter #99 members,

I can't believe January is over and we are already well on our way into February filled with lots of hearts and love. Remember to love yourself first, and always take care of yourself. As women, it is in our nature to always take care of everyone else and we can't do that if we are not taking care of ourselves.

Thank you all who were able to join us at our January meeting, it was awesome and motivational. Our speaker Joie Kya was epic. She asked us to reflect on the last two years living with Covid and having to pivot in many ways. One thing I noticed is even though I couldn't visit in person I did speak more to family and friends than usual. We also made our 2023 vision boards and worked on our goals for the year. It was inspiring to see everyone's vision boards and be able to support each other as we were making them. We had lots of fun, collaboration, and made new connections.

I am excited about our February meeting; we have one of our very own members giving a presentation. Carrie Macintosh, Vice President of Legal/Risk Management at Rosendin Electric, is going to give a great presentation on Risk Management, hope you all can join us. Please look out for an email to get your feedback on any specific questions you might want to ask regarding this topic. This will be a great opportunity to learn and have some great takeaways to share with your companies.

Our committees and board have been very active, and we have some great events coming up in February you can read all about them in the newsletter. We have had so much traction and good vibes collaborating with other great organizations in the industry. Together we are always better and the more we connect the better opportunities we have. Looking forward to WIC Week. We have lots more exciting events coming in March. Have a great February and looking forward to seeing more members and guests at our upcoming meetings and events.

Sincerely,

Angie Ramos ,CIT
