IMPORTANT INFORMATION FOR MERCY SHIPPERS AROUND THE WORLD

FIRST-EVER SURGERY PERFORMED ON BOARD THE *GLOBAL MERCY*—6 MARCH 2023

Years of vision, planning, hard work, and fervent prayers came to fruition earlier today when a 4-year-boy, Amadou, received the first-ever surgery on board the *Global Mercy*! As expressed in a joint Teams post from Dr. Gary, Dr. Sarah, Nate Claus, Jane White, Keren Fuhrmeister, Merryl Mackenzie, and Dr. Mark, **"Praise God for how far He's brought us…"**

For so many Mercy Shippers around the world, this is a long-awaited day. We want to pause and celebrate today while looking forward with anticipation to all that is to come.

Born with one windswept leg and one bowed leg, even sitting for a meal was painful for Amadou. In this first surgery, Dr. Rachel Buckingham was assisted by Dr. Andrew Wainwright. While both are from the United Kingdom, they were supported by a multinational team of professionals.

"Senegal does not yet have their own pediatric orthopedic surgeon. What keeps me coming back is the need. It's the ability to train local health care workers and make a difference . . . You go into medicine to have an impact so here we have a massive impact," said Dr. Buckingham.

Amadou's is the first of more than 40 planned pediatric orthopedic operations this month. Over the next four months, the *Global Mercy* will provide over 800 safe, free surgeries during this inaugural field service in Dakar, Senegal.
