

## BRINGING A WORLD OF PACKAGING SOLUTIONS TO YOU

Cal-Pak offers a full line of secondary packaging equipment to meet any level of automation. We offer individual components or full turnkey lines.

### CASEPACKERS/TRAYPACKERS

Casepacker / traypacker line includes horizontal, top pick & place or bottom loading into virtually any style of case. Our customized infeeds can be designed for a wide variety of products and patterns with speeds up to 105 cases per minute. We offer construction for dry or washdown environments and at 3 years, the best warranty in the industry.

- Fully and Semi Automatic
- Intermittent or Continuous Motion
- Pick & Place or Cross Push
- Top Load, Side Load, or Bottom Load

### ERECTORS/SEALERS

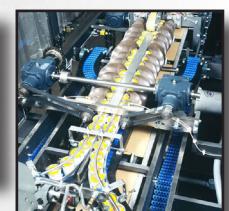

Our range of case erectors and sealers meets all needs from small, low volume applications to the most demanding high volume lines. From basic RCS and HSC cases to difficult doublewall heavy duty designs, we have a machine that fits the need. Closures are available in either hot melt glue or pressure sensitive tape.

- Medium and High Speed
- Available with Glue or Tape Closure
- Top and/or Bottom Sealing

### CARTONERS/ SLEEVERS

The paperboard cartoner products include horizontal and vertical platforms. Customized infeeds for specific products can accommodate multiple sizes and shapes, often on the same machine. The sleever machines include both drop through and wrap over style. Our sleever machines use a unique tucking technology to ensure crisp, square score line corners.

- Medium and High Speed
- Available with Glue or Tuck Closure
- Sleever Available in Top, Bottom or Side Seal

### INSPECTION SYSTEMS

Today's focus on product integrity presents an added need for product inspection. We offer a solid line up of checkweighers, metal detectors, X-Rays and vision systems. All are designed to work within your existing production line and will automatically identify problems and remove the product from the line.

- Checkweighers • Metal Detectors
- X-Ray Systems • Vision Systems

## LABELERS

- Print & Apply, Rotary and Inline designs
- Pressure Sensitive, Cold or Hot Glue
- Shrink Sleeves and Tamper Evident Bands

With a complete range of label applicators, we can meet virtually any application. From a simple label head on a stand, to a print & apply, to an automatic in-line or high speed rotary. We also offer specialty applicator for security tags and a range of table top labelers. In addition, we supply a full range of sleeve and tamper evident applicators.

## BUNDLERS

Our bundler line of equipment is available in both single roll and dual roll. Our single roll systems can be a simple single product wrap and shrink or a more complete system with a tray or pad packer which will accumulate, arrange and load product into a tray or pad prior to shrink wrapping. These are available in speeds up to 105 units/min. Our dual roll gelatine style machines offer a lower cost solution for a wide variety of applications.

- Tray, Pad, or Unsupports Capabilities
- Gas or Electric Tunnel
- Speeds up to 105/min

## IN-LINE SCALES

For the weighment of loose products being loaded in bags, cartons, cases or any open top container. Can also dispense by count. Can be coupled with a variety of vertical packaging equipment including baggers, cartoners and case erectors. Scalable for future production increases.

- Single Head
- Multiple Head
- Integrated Systems

## PALLETIZERS/DEPALLETIZERS

Whether unloading your empty containers or loading your finished cases, we have a solution for you. Our depalletizers and palletizers offer a rugged design for round the clock production. Available in both high level and low level, the flexible design allows for multiple configurations to fit into your facility.

- Low or High Level
- Automatic and Semi-Automatic
- All Electric

## PALLET WRAPPERS

Our automatic line of pallet wrappers are offered in the traditional turnstyle design and the rotating arm models. These are available with several options to aid in the transport of the pallet and various levels of automation in the wrapping operation.

- Table Turn Style or Rotating Arm
- Film Prestretch
- Pallet Infeeds and Discharges
