

DMG-Digital Missions Group

simplifying Mobile Data Forensics

Digital Forensic Investigations

- **Deleted Artifacts – Data**
  Deleted data is almost always the most valuable information in a device. DMG retrieves the deleted data and presents it clearly in a special section of the report.

- **Physical Data Acquisition and Link Analysis**
  The use of apps to communicate and share has grown rapidly. Many apps are released or updated everyday. It is obvious that the analysis of apps is vital to retrieving as much evidence as possible. This is the strongest point of DMG Threat Lab, we dedicate a large part of our team specifically for application analysis

MOBILE DEVICE DATA RETRIEVAL SOLUTIONS

Dig Deeper - Mobile Device Data Aquisition

Digital Missions Group has built the most capable digital forensics lab in the DFW Metroplex. We understand that the preservation, integrity of data, and a defensible chain of custody all play a key role in the forensic collection process and the investigation of electronically stored data. Our forensic experts employ a proven and defensible approach that's capable of creating a comprehensive and forensically accurate image of any known digital device. We ensure the appropriate preservation of data to avoid spoliation, and our rigid procedures preserve forensically sound copies of all storage and media.

Ultimately, our goal is for you to fully understand the scope and scale of the data landscape you need to leverage every possible advantage. We've dealt with extremely sensitive and complex cases and are experienced in all areas of forensics which leads to the readiness required for successful litigation. 469-275-9660 - info@dnacctv.com
