

LUMEN AT HOME

An virtual festival where light, art, & tech meet

LANTERN MAKING KIT

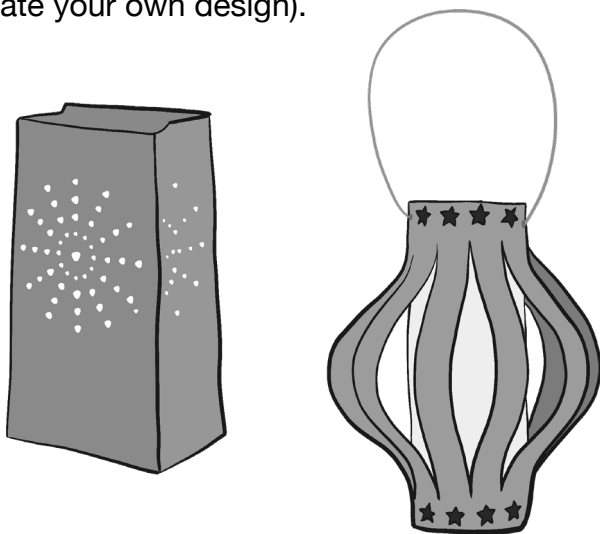

STEP ONE

Take one of the LED bulbs and attach the prongs to each side of the included batter. When pressed together, the light should turn on. Tape the battery and light together — duct tape works best, but any tape will work.

STEP TWO

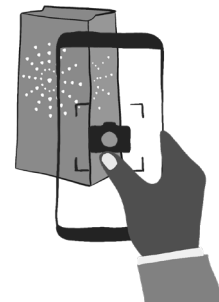

Follow one set of the instructions on the back of this sheet to build your lantern (or create your own design).

STEP THREE

Place the bulb & battery inside the lantern and hang/place.

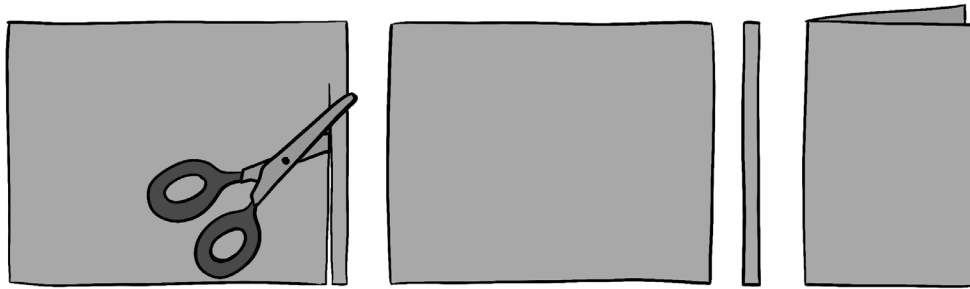

Take a picture and tag @CreateWaterloo on Instagram, Twitter or Facebook to be entered into a draw to win one of three prize packs.

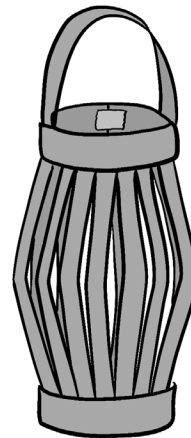

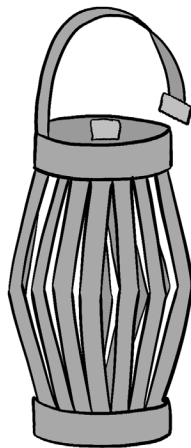

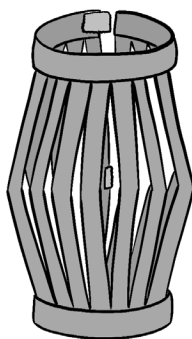

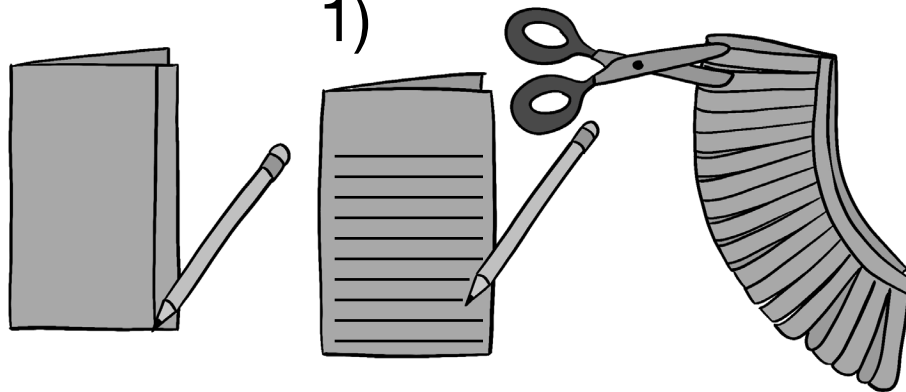

Instructions

Use either of these instructions or design you own.
Cut out interesting shapes, draw on the paper, mixed different colours
together — be creative and have fun!
