

Changes to commercial formulary (drug list) effective April 1, 2025:

Security Health Plan and MedImpact work diligently to provide appropriate, affordable prescription coverage while managing prescription drug costs. As a result, changes are being made to the commercial formulary (small group, large group, level-funded, self-insured) effective April 1, 2025. Some of these changes are positive tier changes that provide cost savings by adding drugs to the formulary that were excluded (not covered) or moved to a lower tier.

What can the type of formulary change mean?

- Members generally **pay less** for drugs on or moved to a **Preferred** formulary tier.
- Drugs that move from **Preferred to Non-Preferred** will generally **cost more**.
- Drugs that move from **Non-Preferred to Preferred** will generally **cost less**.
- Drugs that are **excluded** are **not covered** by the plan.

Excluded to Non-Preferred

Drug was previously not covered and is now covered at a non-preferred tier

Drug Class	Excluded to Non-Preferred
Continuous Glucose Monitors	Eversense 365* Eversense E3*

**Requires previous trial or contraindication to preferred products (Dexcom and FreeStyle Libre). Eversense products require insertion by an authorized Eversense Inserter.*
