Security Health Plan requesting survey responses from providers who see Medicaid patients

As part of a requirement from the Wisconsin Department of Health Services (DHS), Security Health Plan must ensure that age-appropriate behavioral health screening and assessment tools are used for Medicaid patients age 18 and under in primary care settings.

In order to meet this requirement, we are asking Medicaid-licensed Med-Peds, Pediatric and Family Medicine providers for help.

Click here to take the survey to let us know what screening tools are used in your practice. The survey should take less than five minutes to complete and will be open until June 9. We appreciate your help in collecting this important information.
