

Important information regarding Humira® biosimilars

There are currently a number of Humira® biosimilars available on the market. A biosimilar is a highly similar version of an already approved biologic drug, known as a reference product. Biosimilars are carefully tested for safety and effectiveness to ensure they provide the same treatment benefits as the reference product.

As part of our commitment to stewardship and delivery of quality care, Security Health Plan has implemented a strategy for Commercial and Marketplace members that will require a trial of or contraindication to a preferred biosimilar prior to allowing a request for Humira®. The **preferred biosimilars** for 2025 are **adalimumab-adaz** and **Simlandi**®. This requirement applies to *new starts*, which is defined as any patient who has not previously been prescribed an adalimumab product.

Current exceptions to this requirement:

- Patients that have previously tried an alternative biosimilar and are transitioning to Humira®
- Situations where the preferred biosimilars do not have the same FDA approved indications as Humira® for the disease being treated: adolescent hidradenitis suppurativa, pediatric uveitis, and pediatric ulcerative colitis.

Although it is not required at this time, we encourage providers to transition all patients currently using Humira® to a preferred biosimilar where appropriate.

Product information

Product	Concentration	Additional info	Clinical Considerations
Humira®	10, 20, 40, 80 mg	Cost ~\$8,307 for pack of two 40 mg syringes	Citrate and latex free formulations available
Adalimumab-adaz (generic for Hyrimoz®)	20, 40, 80 mg	Cost ~\$1,578 per kit of two 40 mg syringes. Patient copay card info and drug info: https://www.hyrimoz.com/pro/patient-support/	Currently only the 40 mg strength is available to order 40mg/0.4ml formulation (high concentration) is citrate and latex free
