

Change to the prior authorization requirement for 3D rendering for imaging

Beginning September 1, 2025, prior authorization will be required for 3D rendering. There are times when 3D rendering for imaging studies is medically necessary and is needed to deliver the appropriate treatment to our members. However, 3D renderings are not needed for most imaging studies or are part of what an imaging study already provides (such as CTAs, MRAs, etc). To support appropriate utilization and promote financial responsibility, prior authorization through EviCore will be required for all 3D rendering services starting September 1, 2025. This will apply to Commercial, Third-Party Administrators (Insite), Medicaid and Medicare lines of business.

CPT codes included in this change are 76376 and 76377.

- 76376 - 3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound or other tomographic modality with image postprocessing under concurrent supervision; not requiring image postprocessing on an independent workstation.
- 76377 - 3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound or other tomographic modality with image postprocessing under concurrent supervision; requiring image postprocessing on an independent workstation.
