

Follow-up: Security Health Plan transitions to Eviti platform for chemotherapy, radiation oncology reviews

Effective Jan. 1, Security Health Plan partnered with Eviti Connect, a web-based platform enabling real-time decision support and prior authorization for oncology services, including chemotherapy and radiation.

Prior authorization requests for chemotherapy and radiation previously routed through two different platforms, Prime Therapeutics and eviCore. The new collaboration with Eviti streamlines the process, reducing the administrative time involved in obtaining and providing authorization and ensuring a holistic review of a patient's treatment plan in its entirety. [Read more about the transition here.](#)

Here are some key tips and reminders for providers about the transition:

- Supportive drugs do **NOT** require prior authorization.
- CT simulation does **NOT** require prior authorization.
- Eviti treatment approval codes are unique identifiers issued through the Eviti portal when a treatment plan meets evidence-based clinical criteria.
 - These codes indicate approval to proceed. Security Health Plan will honor all Eviti approval codes and will follow up with a formal authorization reflecting all Eviti-approved services, which will be visible in the provider portal.
- **CPT 77417** for port films is currently hard coded in the Eviti system and gets applied to all regimens that do not include any other imaging code.
 - Since IGRT is now bundled with the delivery codes and not separately billable, the port film codes are getting added to each regimen. **This will be removed in the next software update scheduled for Feb. 2, 2026.**

Transitions or extensions of existing oncology treatment plans

Authorizations issued in 2025 by Prime Therapeutics or eviCore for oncology treatment remain valid in 2026, unless changes or updates are required.

- For members actively receiving treatment under an existing approved plan, no action is needed for the duration of the approved authorization.
- However, if updates or changes are required to a treatment plan that began prior to Jan. 1, 2026, providers must submit the updated plan through Eviti.
- For oncology treatment plans that need date extensions, or for assistance with treatment plan transitions, **contact our utilization management team at (800) 991-8109.**
