

Participating Provider Prior Authorization List

Security Health Plan (SHP) is excited to announce the publication of our first participating provider prior authorization list for each product line. These lists will allow providers to view codes that require prior authorization and/or are considered Experimental/Investigational (E&I) in one location, making authorized/E&I codes more accessible and transparent.

These lists are published in two easy to find locations on our securityhealth.org/providers public website. Select either 'Authorizations' or 'Medical Policies' from the top toolbar and locate the section titled "List of services that require prior authorization". Each product line will have its own list as some requirements differ between products. The documents contain services that are prior authorized by SHP, eviCore and Prime Therapeutics (formerly Magellan Rx). Refer to the top of the page, where the CPT/HCPCS code appears, to determine which entity manages the prior authorization for that service.

Please note these lists contain **most** prior authorization requirements that are CPT/HCPCS code dependent (excluding DME as managed by Northwood). Site of service prior authorization requirements (e.g. inpatient, skilled nursing facility/swing bed, home health, observation care over 48 hours, etc.) will not be demonstrated by a CPT/HCPCS code in these documents but still require prior authorization.
