New Security Health Plan updates to commercial and exchange formulary

Security Health Plan may remove drugs from our formulary or add rules about whether and when certain drugs are covered during the year. Your patients may not be currently using these products, but we want to provide you with these updates to alert you of any future changes.

Effective May 1, 2023, Freestyle Libre continuous glucose monitors and supplies will be removed from the formulary for our commercial and exchange lines of business. Those members who are currently established on Freestyle Libre products, will be allowed to continue receiving those products until the end of 2023.

Dexcom products (including Dexcom G6 and G7) offer the broadest array of features, and will be the preferred continuous glucose monitoring system for commercial and exchange lines of business. Freestyle Libre and Dexcom products will both remain on formulary for Medicare Advantage members to avoid requiring our older adult population to switch products.
