# Security Health Plan to complete a risk adjustment and validation audit

Security Health Plan will participate in a risk adjustment data validation (RADV) audit this June. The audit will cover the 2022 benefit year and is part of The Department of Health & Human Services (HHS) and Centers for Medicare and Medicaid Services (CMS) annual yearly requirement.

The audit is a random sample of members enrolled in Affordable Care Act (ACA) compliant individual and small group plans. CMS conducts RADV activities to ensure the accuracy and integrity of risk adjustment data and risk adjusted payments. The HHS-RADV process verifies that diagnosis codes submitted for payment by an organization are supported by the provider's medical record documentation for an enrollee.

Security Health Plan is responsible for providing CMS with source medical record documentation to validate health plan-submitted medical claims and associated diagnoses for each chosen enrollee.

In the near future, we may be contacting your medical records department to request records for Security Health Plan members enrolled in an Affordable Care Act plan. Accompanying the request will be a memo from CMS with more information about the RADV process.

We appreciate your cooperation with this project, as a timely response will benefit our members and your patients. Thank you in advance for your assistance.
