

2026 radiation treatment code updates

Several radiation therapy CPT and HCPCS codes are being revised or retired, effective Jan. 1, 2026. Below is a high-level summary of the changes and any necessary action (if applicable) for providers.

Revised radiation delivery codes

The following CPT codes remain active, but their descriptions have been updated. Existing authorizations will be honored.

- 77402 – Now reflects *Level 1* radiation delivery (e.g., simple electron or 2D photon treatments), including imaging guidance.
- 77407 – Now reflects *Level 2* radiation delivery (e.g., single-isocenter 3D or IMRT photon treatments), including imaging guidance.
- 77412 – Now reflects *Level 3* radiation delivery (e.g., multiple isocenters or motion-managed photon therapy), including imaging guidance.

Deleted IMRT delivery codes

The following IMRT delivery codes are retired:

- 77385 (simple IMRT delivery)
- 77386 (complex IMRT delivery)

The work previously reported with these codes is now included in 77407. Existing authorizations using the retired codes will be mapped to the revised codes.

Deleted CT guidance code

- 77014 (CT guidance for radiation field placement) is deleted.
- This service is now bundled into the daily radiation delivery codes (77402, 77407, 77412).

No action required.

Deleted HCPCS G-codes

- G6001–G6017 (radiation treatment delivery G-codes) are deleted.

Providers may resubmit a revised treatment plan for remaining therapy using the updated CPT codes.
