In-scope indications include all medically accepted indications unless otherwise noted in the table above. These step therapy requirements apply to Medicare, individual and family, small and large employer group plans as well as select Security Administrative Services groups managed by Prime Therapeutics. Preferred biosimilars may differ based on the line of business.

The Centers for Medicare and Medicaid Services (CMS) previously issued guidance that provides Medicare Advantage plans the option of applying step therapy for physician-administered Part B drugs in a way that lowers costs and improves the quality of care for Medicare beneficiaries.

Security Health Plan implemented step therapy requirements in 2019 and has added to the program periodically for new starts of certain targeted drugs.

Implementation will continue to be for new starts only (no use in the previous 365 days), meaning no beneficiaries currently receiving eligible step therapy drugs under Part B will have to change their drug. Step therapy prior authorization will be managed through
